

## **Manship School Survey of Public Reactions to Coronavirus in Louisiana May 5, 2020**

---

The LSU Manship School Survey of Public Reactions to Coronavirus in Louisiana examines how the public in Louisiana has reacted to the spread of the novel coronavirus in the state, including its adherence to the state of Louisiana's [stay-at-home order](#), reactions to government policy responses to the pandemic, experiences with the coronavirus and concerns looking ahead. This survey provides a unique systematic analysis of public reaction to the novel coronavirus spread and its economic implications.

### **Louisiana residents express widespread compliance with stay-at-home order and other public health recommendations, but with significant gaps**

Four out of five Louisiana adults say they have stayed home instead of going to work, school or other regular activities during the coronavirus outbreak. The same share say they have sheltered in place, leaving home only for essential services such as food, medicine and health care.

However, when asked about specific reasons for doing so, only 50% say they never leave the house for reasons that fall outside of what Louisiana's stay-at-home order permits. We asked respondents how often they left their home in the past two weeks for each of the following reasons:

1. To work
2. To attend religious services or other ceremonies such as funerals or weddings
3. To attend a social gathering or visit friends
4. To get groceries
5. To pick up medications and other health necessities
6. To go to a doctor or other medical appointments
7. To pick up food from a restaurant
8. To care for a friend or family member
9. To exercise outdoors (for example, walk, ride bike, hike, jog)
10. To walk pets or bring pets to veterinarian
11. To help someone get necessary supplies
12. For any other reason

We combined responses to items that fall outside the stay-at-home order provisions (numbers 2, 3 and 12) and calculate that half of Louisiana adults say they have never left home for these reasons during the past two weeks. Another 30% say they have done so once a week or less often. One in five Louisiana adults report leaving home multiple times a week for reasons that violate the stay-at-home order.

When outside of their homes, 49% of Louisiana adults say they wear a face covering very often or always, and 84% say they maintain at least 6 feet of distance from other people very often or always.

Seventy five percent of Louisiana adults say they very often wash their hands with soap for at least 20 seconds each time, and 50% say they disinfect frequently used surfaces in their homes very often. Only 24% say they have completely avoided touching their face with unwashed hands in the past two weeks.

We also asked respondents how much they intend to comply with these various public health recommendations in the next two weeks. Prospective behavior reports are largely similar to retrospective reports for the previous two weeks; however, intentions to wear face coverings and to maintain at least 6 feet of distance from other people when outside the home increase to 59% and 86%, respectively.

### **Majorities approve of federal, state and local government response**

Fifty-four percent of Louisiana adults approve of the federal government response to the outbreak. Somewhat larger shares approve of the state government response (64%) and their local government response (62%).

Louisianans trust public health officials and doctors the most for reliable information on the coronavirus: 80% have a great deal or fair amount of trust in the federal Centers for Disease Control & Prevention (CDC); 82% trust the Louisiana Department of Health (LDH); and 86% trust their own doctors. Most Louisianans also trust President Trump (54%) and Governor Edwards (73%) for information about the virus. Two-thirds of Louisianans (67%) trust their local news, but only 48% trust the national news for information about coronavirus.

### **Bipartisan support for measures aimed at slowing spread of novel coronavirus**

Three-quarters of Louisianans—including most Republicans and most Democrats in the state—believe the United States and Louisiana should continue measures to slow the spread of the coronavirus, such as stay-at-home orders and social distancing, even if it means that businesses remain closed.

To measure support for these policies, we modified a question from [national polling by the Kaiser Family Foundation](#), to apply to Louisiana. We asked respondents which of the following statements comes closer to their view:

- The U.S. and Louisiana should continue measures to slow the spread of the coronavirus, even if that means many businesses will have to stay closed.
- The U.S. and Louisiana should ease up on measures to slow the spread of the coronavirus soon, in order to get the economy going again, even if that means more people would get coronavirus and could die.

Furthermore, because responses to questions about political issues are often very sensitive to specific wording, we asked six variants of this question with different prefaces referring to the mandates in place at the time of the survey. These variants (with differences underlined> are:

1. President Trump has extended stay-at-home and social distancing mandates through April 30. Which comes closer to your view?
2. Governor Edwards has extended stay-at-home and social distancing mandates through April 30. Which comes closer to your view?
3. Both President Trump and Governor Edwards have extended stay-at-home and social distancing mandates through April 30. Which comes closer to your view?
4. Following the recommendations of public health officials, President Trump has extended stay-at-home and social distancing mandates through April 30. Which comes closer to your view?
5. Following the recommendations of public health officials, Governor Edwards has extended stay-at-home and social distancing mandates through April 30. Which comes closer to your view?
6. Following the recommendations of public health officials, both President Trump and Governor Edwards have extended stay-at-home and social distancing mandates through April 30. Which comes closer to your view?

Although the level of support varies across question wording from a low of 67% (for version #2) to 81% (for version #3), in each case, a substantial majority of Louisianans chose the option prioritizing public health over economic return.

On average, across all variants, 74% of Louisiana adults believed the country and state should continue the mandates. Most Republicans (60%) supported continued mandates, as did most Democrats (94%).

Indeed, the lack of wide partisan divisions on policy, approval of government response and trusted information sources is noteworthy. Although responses from Democrats and Republicans to these questions are by no means identical, instances in which majorities in each party stand on opposite sides are rare. Among questions about policy and government, a majority of Republicans and a majority of Democrats disagree in only three cases, and each of those refers to a national subject: approval of the federal response, trust in President Trump for information about coronavirus and trust in the national news for information about the coronavirus.

When it comes to approval of state and local government responses; trust in state leaders, public health officials and local media; and support for measures to mitigate the spread of the disease, most Democrats and most Republicans agree.

### **Many Louisianans face hardship**

Nearly one-third of Louisiana adults (30%) say they have lost income from a job or business because of the coronavirus. A similar share (27%) say they have lost their job or had their hours reduced as a result of the outbreak.

Seven percent said they have lost their health insurance. More than a quarter (27%) have been unable to get medical care for conditions or concerns not related to the coronavirus, and 13% have been unable to get prescription medication.

One in five Louisiana adults have skipped or cut the size of their meals in the past two weeks because they did not have enough food.

## **Coronavirus affecting Louisiana residents' mental health and emotions**

Approximately half of adult Louisiana residents (53%) say worry or stress related to coronavirus has had a negative impact on their mental health. Among those reporting a negative impact, 36% say these impacts are major.

Sixty-two percent of respondents report feeling anxious about the coronavirus outbreak. Sixty percent report feeling upset; 51% report feeling afraid; and 52% report feeling angry.

On the other hand, 72% feel hopeful and 59% feel confident.

## **Louisiana residents express significant concerns about both health and economic risks**

Large majorities of Louisiana residents worry about health risks to themselves and their community:

- 77% of Louisiana adults are worried they or someone in their family will get sick from coronavirus.
- 60% worry the state's health care system will be overrun, and people will not be able to get needed medical care.
- 68% worry there will not be enough personal protective equipment for health workers to protect themselves.
- 56% worry their local hospital will run out of necessary equipment like beds or ventilators to treat patients.

Similarly sized majorities worry about the impact to the local and national economy:

- 66% worry local businesses will close permanently because of revenue loss during the outbreak.
- 73% worry the national economy will head into a recession because of the coronavirus pandemic.

However, the share worried about their personal financial situation is smaller—38% say they are worried about losing their jobs or having their hours reduced as a result of the pandemic.

## **Split over future of outbreak**

Louisianans are split evenly in their beliefs about where the state is headed in the pandemic: 51% say the worst is behind us and 49% say the worst is yet to come.

## Methodology

Dr. Michael Henderson, Director of LSU's Public Policy Research Lab, and Dr. Martin Johnson, Kevin P. Reilly Sr. Chair in Political Communication and Dean of the Manship School, designed the survey instrument, replicating some items from the Kaiser Family Foundations' national polling on the impact of coronavirus, and analyzed the results.

Data collection was conducted by YouGov, an organization that conducts innovative online polling for a variety of clients, including *CBS News*, the *Economist* and the *New York Times*.

[Research from scholars at Harvard University and Tufts University](#) shows that well-designed online opt-in sampling techniques, like those YouGov uses for its surveys, perform as well as traditional Random Digit Dialing telephone polls.

This survey was fielded between April 15-28, 2020. Respondents were selected from YouGov and two other online panels. These are opt-in panels, which are open for anyone to join after a double-opt-in process. YouGov removed duplicate Louisiana respondents across panels by scraping macro-data geolocation, IP address, cookies, zip code and demographics.

YouGov interviewed 1053 eligible respondents, 1004 were then matched down to a sample of 1000 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race and education based on known characteristics of Louisiana residents using the 2018 American Community Survey (ACS).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 Presidential vote choice, and a four-way stratification of gender, age (4-categories), race (4-categories) and education (4-categories), to produce the final weight.

The margin of error is 4.0%.

The survey was funded by philanthropic support from the Kevin P. Reilly Sr. Chair in Political Communication held by Dr. Martin Johnson.

**Q31. [INSERT] extended stay-at-home and social distancing mandates through April 30. Which comes closer to your view?**

	The U.S. and Louisiana should continue measures to slow the spread of the coronavirus, even if that means many businesses will have to stay closed.	The U.S. and Louisiana should ease up on measures to slow the spread of the coronavirus soon, in order to get the economy going again, even if that means more people would get coronavirus and could die.
